### Keep Your Water Sparkling

Industry standards recommend changing out your ice, water and coffee line filters every 6 months, depending on your water conditions. Regular filter changes and maintenance keep your machine running at peak performance, and your drinks sparklingly clear.

Each filter contains a built-in prefilter to remove sediment and coarse dirt particles. Inner workings then effectively filter out smaller particles that affect taste, protect the equipment from abrasion and lower energy costs by reducing limescale. Activated carbon block filters reduces chlorine taste and odor, so that the flavor of your beverage shines.
